TestLink™

A world class, single-source service for those wanting to enter the ATM Maintenance market

ATM Maintenance Enablement.

TestLink's ATM Maintenance Enablement service provides our customers with the tools needed to rapidly enter the ATM Maintenance business. Using our extensive range of ATM services, you can now start bidding on maintenance contracts without having to develop extra competencies that would normally take significant time and money to establish yourself.

The elements required to enter the ATM Maintenance business are:

• Competent field engineers
• Initial seed parts inventory
• Inventory management system
• Workshop repair capability
• Logistics

Competent Field Engineers
TestLink has successfully trained hundreds of ATM Engineers in Europe and North America on how to carry out First & Second line maintenance on NCR, Wincor and Diebold ATMs.

All individuals undertaking training are provided with training materials for further reference and a skills based assessment at the end of the course.

"Our purchasing and logistics teams have over 25 years of experience working with ATM parts."

Initial Seed Inventory
Based on our knowledge of part failure rates and the profile of your ATM estate, our technical support teams will be able to determine exactly which parts will be required in your initial seed inventory. Once agreement has been reached, our inventory planning team will source the parts and ensure they are all optimally located.

Benefits

• Support of NCR, Wincor & Diebold ATM estates

• Single source for providing complete ATM Maintenance capability

• Independent of any manufacturer

• Proven track record

• Short lead time to enter the ATM Maintenance market

• Support of the latest ATM technology

TestLink™

A world class, single-source service for those wanting to enter the ATM Maintenance market

Because we understand that each client's requirements are different, we make sure we tailor our planning to ensure their service levels can be achieved from the very beginning.

Inventory Management System
Our inventory management system has been built from the ground up to optimise the processing and distribution of ATM modules and parts. This ensures we always have the right part, in the right place at the right time.

Repair Services
Our repair service can be set up in your country or use our existing locations. However all TestLink's processes and systems will be implemented to ensure high reliability and fast turnaround thereby optimising inventory levels.

Logistics
Using our network of logistics partners, we are able to provide the fast and cost effective movement of parts to wherever they need to be.

"Our highly trained technicians are experts at repairing ATM parts manufactured by NCR, Wincor and Diebold."

"Our advanced logistics network is able to move parts around the world, at low cost and with short lead times."
